Two-Color Bath Bombs

by Miss Emily at Eaton Branch Library

Bath bombs are great for relaxation and skin care, but they can be awfully expensive if you buy them in the store – so try making your own! This craft kit will provide everything you need to make at least one bath bomb (this will vary depending on the size of the mold you receive).

This kit includes:

- Baking soda
- Citric acid
- Epsom salts
- Cornstarch

NOTE: The above items will already be mixed together when you get your kit

- 1 tsp olive oil
- 2 packs of mica powder for coloring
- 1 bath bomb mold (sizes will vary)

Directions:

1. Mix dry ingredients (not including mica powder) in one bowl.
2. Add the olive oil to the dry ingredients and stir until the mixture holds together.
3. Divide the mixture equally into the other two bowls.
4. Add mica coloring of your choice to one bowl and stir until the color is evenly distributed. The amount of coloring you use depends on how vivid you want your color to be. Repeat this process for the last bowl.
5. Open your bath bomb mold and spoon one color into each side. Make sure each side is slightly overflowing. Once finished, press both sides together.
6. Allow to dry for 24 hours. Once dry, remove your bath bomb from the mold!
7. When you're ready to use the bath bomb, drop it in water and let it dissolve. It should take about 30 seconds for it to dissolve completely. They can be stored in an airtight container for up to 6 months.
